## MAJOR FUNCTIONS

## Display scaling function(mV, Volt, mA only)

This function changes and sets the display value according to scale and input range.

Ex) In case of input range 0.00~10.00Hz and

Level 0.00~7.00t/m

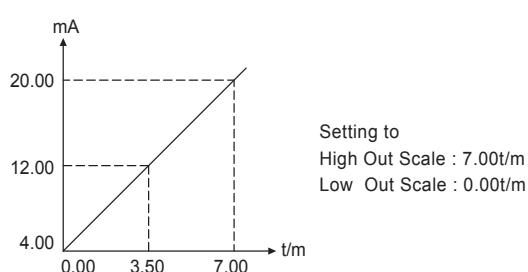

## Current output scaling function

This function is that 4.00~20.00mA output value is changed by output scale.

Ex) In case of display value 0.00~7.00t/m,

Output 4.00~20.00mA

## Pulse output scaling function

If input is mA(Range 0), it sets pulse number per hour when full scale(20mA).

Ex) Setting 3600, it outputs 3600 pulse a hour(1 pulse a second) when 20mA current inputs. If input is pulse (Range : 1~6), it sets a rate of input versus output.

Ex) Setting 100, It output 1 pulse when 100 pulse inputs.

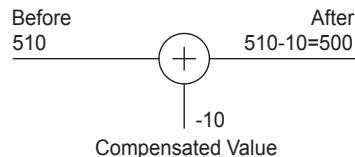

## Sensor compensation function

The function is useful for compensating error by long sensor line or changed zero point by aged sensor.

Ex) Before sensor adjust = 510°C

After sensor adjust

$$\begin{aligned} &= \text{measured value} + \text{compensated value} \\ &= 510 - 10 = 500^\circ\text{C} \end{aligned}$$

## Function(Volt, mA type only)

**L in**

Pass the input as it is.

Used for general input type and linearity input.

**root**

Pass the input after  $\sqrt{\cdot}$ . Used for flow rate by orifice.

**L int**

Like level measuring, when it does not display measuring under zero, it always can display zero by using limit function.

## Alarm function

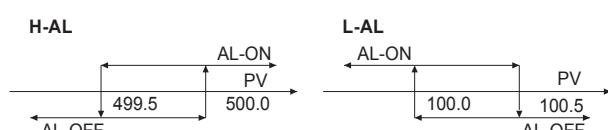

Alarm type : High, Low

Ex) AL-1 : High alarm value 500.0,

Alarm dead band setting 0.5

The high alarm(AL-1) is ON when the present value(PV) is 500.0 or more, and OFF when 499.5 or less.

The high alarm(AL-2) is OFF when the present value (PV) is 100.5 or more, and ON when 100.0 or less.

## Filter function

Filter is moving average filter and it has 4 kinds of function.

**none**

It displays the change of input without filter.

**Ru 4, 8, 16, 32**

It displays in recent input No 4,8,16 sample average.

Setting filter function delays response.

Do not use filter when high speed response is needed.

When output and display value are changed by irregular input, it is possible to get regular input and display value by using filter function.
